

# Working Prototype Known Problems Report

**Product Name:** Fete

**Team Name:** Fete

**Date:** 11/28/18

• List of functions not working correctly (can lose up to 20 points) List all problems with your software that your team has identified. Include in the item entry the input/action that causes failure; location of fault (if known); possible action for removal of fault. You will not lose points for items on the list; you will lose points for failing to put items on the list if your TA or the prof finds a problem during the acceptance test.

1. When user joins a party from home screen, they get redirected to “My Parties”, but there is no way to go back to the home screen because if they press “back”, they will be directed to the join party screen. *Possible action for removal:* Include Nav Drawer option on Other screens other than Home Screen.
2. App will crash if users tries to upload a video from phone. *Possible action for removal:* This can be fixed by doing more research on Android and figuring out how to upload videos.
3. When user chooses to use Google Pay, it allows them to click “Buy” and confirms the purchase but then any other “Pay” commands does not work after the first. *Possible action for removal:* This can be fixed by doing more research on Android Pay
4. Sometimes when you press back, the list of users or parties is duplicated. Sometimes this happens other times we cannot replicate it. Not sure where this is coming from. Assumption is that it has to do with the recyclerview.
